---

humor\_dataset

*A list of English words with the "humor ratings" attached.*

---

### Description

A dataset compiled by Tomas Englethaler for his research on humor. <https://github.com/tomasengelthaler/HumorNorms>  
Please visit his page for more details on the methodology used to score words.

### Usage

```
data(humor_dataset)
```

### Format

A data frame with 4997 rows and 16 variables:

**word** string of the actual word  
**mean** mean of humor rating across all audiences  
**mean\_F** mean of humor rating (women)  
**mean\_M** mean of humor rating (men)  
**mean\_old** mean of humor rating (old)  
**mean\_young** mean of humor rating (young)  
**n** audience size  
**n\_F** audience size (women)  
**n\_M** audience size (men)  
**n\_old** audience size (old)  
**n\_young** audience size (young)  
**sd** sd of humor rating across all audiences  
**sd\_F** sd humor rating (women)  
**sd\_M** sd of humor rating (men)  
**sd\_old** sd humor rating (old)  
**sd\_young** sd of humor rating (young)

---

makeRadlibs	<i>makeRadlibs</i>
-------------	--------------------

---

**Description**

makeRadlibs

**Usage**

```
makeRadlibs(phrase, wordset = NA)
```

**Arguments**

phrase	String including any number of the words noun, verb, adjective, adverb, plural, or interjection enclosed in curly braces
wordset	Data table of your choosing with columns "word" and "pos" at the minimum. Preferably all lowercase.

**Value**

New string replacing the keywords with alternatives. Hopefully funny.

**Examples**

```
## Not run: makeRadlibs("not sure if i should {verb} or {verb} because it's an {adjective} {noun}")
```

---

POSTagger	<i>POSTagger</i>
-----------	------------------

---

**Description**

POSTagger

**Usage**

```
POSTagger(wordDF)
```

**Arguments**

wordDF	Dataframe including one column labeled "word" for tagging
--------	---

**Value**

Original dataframe including part of speech columns.

**Examples**

```
## Not run: newwords <- data.frame(word = c("cat", "green", "slowly"))
POSTagger(newwords)
## End(Not run)
```

---

proper\_nouns

*A list of English proper nouns with the classifications.*

---

**Description**

A dataset derived from <https://www.kaggle.com/vered1986/propernames-categories/version/1>. The words are British focused, and I have adjusted some classifications to be easier for users to work with.

**Usage**

```
data(proper_nouns)
```

**Format**

A data frame with 747 rows and 2 variables:

**word** string of the actual word

**pos** part of speech (aka celebrity, place, etc)

**Source**

<https://www.kaggle.com/vered1986/propernames-categories/version/1>
